

Customer Personality & Campaign Analysis

Strategic Insights for Marketing Optimization

1. EXECUTIVE SUMMARY

This comprehensive report evaluates customer behavior within a multi-channel retail environment. By synthesizing demographic profiles, financial health, and historical purchase data, we identify key drivers of profitability and propose data-driven strategies to enhance campaign ROI and customer retention.

2. KEY PERFORMANCE INDICATORS

50.2

AVG. CUSTOMER AGE

Core Analytical Insights:

- **The Education Premium:** Customers with PhDs and Graduate degrees exhibit the highest lifetime value (LTV), significantly outperforming other demographics.
- **The Family Constraint:** A strong negative correlation exists between the number of children at home and total luxury spending. Families prioritize essential categories over premium goods.
- **Product Dominance:** Wines and Meat Products constitute the bulk of revenue, representing the "anchor" categories for high-value customers.

3. OPTIMIZED DATA SCHEMA

For scalable analysis, the dataset was normalized into six distinct tables, linked via a unique Customer ID:

Segment	Key Dimensions	Engineered Features
Customer Info	Education, Marital Status	Age, Total Children, Is Parent
Purchase Behavior	Wines, Meat, Gold	Total Spent
Financial Details	Annual Income	Imputed Missing Values
Engagement	Enrollment Date, Complaints	Day Name, Recruitment Trend

4. STRATEGIC RECOMMENDATIONS

- High-Value Targeting:** Deploy personalized "Premium Wine & Gourmet" campaigns exclusively to high-income, child-free households.
- Temporal Optimization:** Schedule major marketing blasts on Mondays and Wednesdays to capitalize on observed peak customer registration trends.
- Cross-Selling Bundles:** Incentivize families by bundling essentials (Fruits/Sweets) with high-margin items to increase the total basket size.
